

The Face of Winter

How to Protect Your Skin in the Dry, Cold Months

Barbara Hey

Winter can be tough on skin, but there's much you can do to defend against the assaults of the season. The skin's primary role -- to protect the body -- is ever more important in extreme weather, and in most locations, that means extreme cold outside and dry, over-heated air inside during the winter. Your epidermis must "weather" these drastic fluctuations in temperature, and often the result is chapped, scaly, flaky skin.

Facing the Frost

The biggest wintertime concern is dehydration. In colder climates, you definitely need to increase the protection quotient. "You must

months. And this is especially important for the face. And if much time is spent outdoors skiing, snowboarding, or walking, for example, your complexion needs heavy-duty protection from brisk wind and winter sun as well.

"People often forget about sunscreen in the winter," says Schumann-Ortega. For regular outdoor time -- a few hours a day -- a sunscreen with an SPF of 20 should be sufficient. But if a winter trip on the slopes or shore is part of the plan, sunscreen with a higher protective factor is needed, even if your time is spent beneath an umbrella. "Both snow and sand reflect the sun," she says, so don't be caught unprepared. Double your efforts to protect the parts of the

Everything you do can be done better from a place of relaxation.

Protect your skin from winter's harsh elements for a healthy complexion year round

over-treat skin to keep it hydrated," says Barbara Schumann-Ortega, vice president of Wilma Schumann Skin Care in Coral Gables, Florida. That means a shift from lighter skin care products used during warmer months to winter-weight products, such as thicker, cream-based cleansers and moisturizers. These will provide stronger barriers against the harsh environment of winter

face particularly prone to display the effects of dryness: The lips and the area around the eyes need a continual shield against the elements. Ask your skin care professional which products are appropriate for your skin type and effective, seasonal moisturizers and sunscreens.

"When it's cold, you lose blood flow to the skin," says Schumann-Ortega. The result is a dry, dull tone. Facial treatments can increase circulation and rejuvenate a healthy glow. But, Schumann-Ortega cautions, be careful with peels and resurfacing treatments during the winter, as they can do more damage than good with skin that's already taxed from the harsh environmental conditions.

Winterizing the Body

It's not just the face that suffers in the winter. Skin everywhere dries out, and gets that flaky look and uncomfortable winter itch. Hot baths -- a delightful antidote to the chill -- can further exacerbate dry skin. The solution? Add 10 drops of an aromatic essential oil to the bath to moisturize as you soak. (Lavender is particularly soothing to dry skin.) Then apply an emollient moisturizer -- a product that feels particularly thick and creamy to the touch, like a body butter -- geared for extra dry, rough, chapped, or cracked skin. Apply it immediately after drying off, when the skin can most readily absorb the lotion and restore its barrier. If dryness is still bothersome, indulge in a salt rub and full-body conditioning wrap to re-moisturize.

And don't forget feet and hands. The feet, hidden by socks and boots all winter long, often go neglected this time of year and need attention, but the most obvious casualties of winter are the hands. Exposed to the elements and the subject of frequent hand-washing during the cold and flu season, hands can turn to rawhide just as holiday parties go into full swing -- not an elegant look for holding onto a champagne flute.

This is the season to slather hands with heavy, oil-rich cream at night and cover them with gloves. And don't forget feet: they also require the same special care. Consider a moisturizer for them in the evenings and sleep with socks on. In the morning, your feet and hands will feel soft and moisturized. Your skin care professional can recommend appropriate gloves, socks, and a home-care routine for this process. In addition, treat hands and feet to regular spa treatments to exfoliate dead skin cells, and paraffin treatments to replenish and moisturize.

Relax and Enjoy It

In winter, and all seasons, stress can disrupt even the best skin. "We always ask clients what's going on in life, since adrenaline, holiday pressures, and even joy can have an effect on body chemistry," says Schumann-Ortega. The skin reflects it all. "Some clients may come in after four weeks and they look like a train wreck," she says. So do your best to minimize the effects of stress with exercise, meditation, and proper diet. And don't skimp on the self-care. Schedule time for pampering, relaxing treatments.

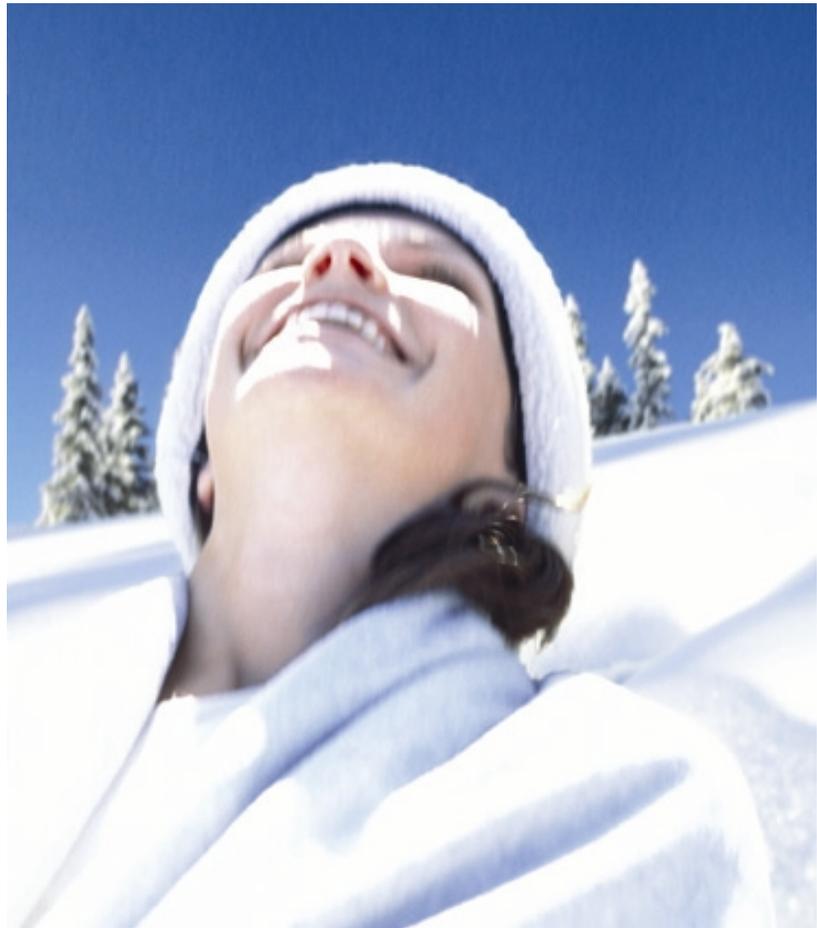

Some final tips:

- Drink water. Even when there's a chill in the air and thirst isn't overwhelming, water consumption needs to be high to combat the dry air.
- Avoid products with a high percentage of synthetic ingredients (propylene glycol, petroleum), chemical detergents

(sodium laurel sulfates), and artificial colors and fragrances.

- Employ quality skin care products suited to your skin type.
- Check your medications. Illness and ongoing pharmaceuticals can upset pH balance.
- Incorporate nutritional supplements into your skin health regimen, such as essential fatty acids, zinc, magnesium, vitamin A, and B vitamins.

Winter doesn't have to take its long, hard toll on your skin. Ask your skin care professional about hydrating products and circulation-enhancing treatments to ease the long, dry months of winter. After all, spring is just around the corner.

When you're outside in harsh conditions, cover up with gloves, scarves, and sunscreen.

Footprints for Health

You walk on them all day, but did you know your feet do more than carry you from one place to the next? They also have a unique connection to balanced health and well-being. In a form of bodywork known as reflexology, the feet are said to contain reflex areas that mirror and connect to all parts of the body--and pressure on these points can actually influence your state of health.

Reflexology is viewed primarily as a stress reduction or relaxation technique. Using the thumb, finger, and hand, gentle pressure is applied to reflex areas of the feet in order to decrease stress and bring the body into equilibrium.

Although simplistic in application, the effects of the treatment can be profound. Through activation of nerve receptors in the hands and feet, new messages flood into the body system, changing its tempo and tone. In essence, the foot or hand becomes a conduit for sharing information throughout the body. Function in the connecting area is

improved and, at the same time, the body experiences overall relaxation and benefits to the circulation and elimination systems. When the body's systems are at optimal functioning, self-healing is enhanced.

Scientific studies have documented the benefits of reflexology for a variety of ailments, ranging from reduction of pain, improvement in circulation, and release of tension, to improved effectiveness of medication, as well as benefits for diabetes and headaches.

In this sense, reflexology is not a medical treatment for specific symptoms or diseases, but rather a way to facilitate the body's inherent healing power.

Treat your feet, and body, to reflexology.

Try This Breathing Exercise

Anne Williams

Do you ever find yourself unconsciously holding your breath when you're tense? This can cause tension to build in your body and may let the chest collapse, leading to misalignment.

Proper breathing provides oxygen to the muscles and body, helps you stay relaxed and centered, and even helps you maintain correct body alignment throughout your day.

You can also use breathwork as part of a stress-reduction program by following this progressive relaxation exercise.

1. Begin by lying in a comfortable position without crossing your arms or legs, and focus on your breathing to create a slow, deep pattern. Inhale through your nose while counting to 10 and expanding your abdomen. Hold the breath for one second, and exhale

through your nose on the count of 10. Inhale and exhale in this pattern five times.

2. Beginning with your head, tense your facial muscles as tightly as possible and count to five. Release the muscles completely, and sense the muscles feeling heavy and still. Work down your entire body, tensing muscle groups and then relaxing them. After the head, move to the neck, chest, arms and hands, abdomen, back, thighs and gluteals, lower legs, and feet.

3. After relaxing each set of muscles, mentally scan your body for any areas of remaining tension and ask those areas to relax completely.

4. Repeat the slow breathing exercise.

5. Gently begin to move your body to come out of the deeply relaxed state.

Try using progressive relaxation directly

before or after your sessions, directly before bed, or at any time during the day as a pick-me-up. Focus on taking full, deep, even, rhythmic breaths. With a little practice, you can become more aware of your own breathing patterns and use breathwork effectively as you move throughout your day.
